

**MEMORIAL HOSPITAL
INPATIENT SUSCEPTIBILITY DATA
GRAM POSITIVE COCCI 2025**

Hal Hill, M.D. Chairman of Antimicrobial Stewardship Committee

Organisms and Numbers Isolated
Antimicrobial Susceptibility Data (% Susceptible)

Organism	Total isolates	PCN	OXA	CLIN	DOX	T/S	VANC	LIN	DAP
Staphylococcus aureus	541		50	67	80	95	99	100	100
MRSA	270			62	71	92	99	100	100
MSSA	271	25	100	73	89	99	100	100	100
Enterococcus faecalis	265	99			22		96	99	57
Enterococcus faecium	40	37			27		57	90	

PCN-penicillin, OXA-oxacillin, CLIN-clindamycin, DOX-doxycycline, T/S-trimethoprim/sulfamethoxazole, VANC-vancomycin, LIN-linezolid, DAP-daptomycin

*Strep pneumoniae : Of 38 isolates in 2025, 91% were ceftriaxone susceptible and 100% levofloxacin susceptible.

*Enterococcal species Of 32 enterococcal bacteremias in 2025, 24 were due to Enterococcus faecalis and 8 were due to Enterococcus faecium. 100% of the Enterococcus faecalis isolates were sensitive to ampicillin . 66% of the Enterococcus faecium isolates were vancomycin resistant (VRE).
